EDUCATION

University of Washington Tacoma

B.S. Computer Science & Systems

Graduation Date: June 2023

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++, Rust, Dart, SQL

Frameworks Libraries: Vue.js, FastAPI, Electron, Firebase, Android, OpenCV

Tools Platforms: Git, AWS, Azure

WORK EXPERIENCE

Burlington Stores

Software Engineer

June 2023 — Present

Burlington, NJ

- Developed and maintained an Android application (Java) for store managers, improving in-store productivity by streamlining task management, training, and access to real-time performance metrics; used across 1100+ stores.
- Built and shipped multiple internal web applications using Vue.js and FastAPI, including a workload planning tool used daily by 1100+ locations to support retail operations and enhance decision-making.
- Designed and implemented an Electron-based queue management system integrated with store registers, reducing customer wait times by 10% through dynamic register call announcements.
- Collaborated cross-functionally with retail leadership and IT to identify bottlenecks, gather feedback, and iterate quickly on software tools tailored to store manager needs.

Weyerhaeuser

IT Intern

July 2022 — December 2022

Seattle, WA

- Designed, developed, tested, and deployed process automation tools using UiPath.
- Utilized Azure DevOps pipelines to deploy high-quality solutions with standard CI/CD.
- Provided maintenance support to existing automation tools to accommodate software updates and optimize deployed solutions.
- Consulted with various departments to eliminate repetitive tasks, improve productivity, and reduce human error.

PERSONAL PROJECTS

C Compiler - C++

- Built a C → x86-64 compiler from scratch implementing lexical analysis, recursive-descent parsing, AST construction, and expression code generation.
- Generated correct assembly for arithmetic, relational, and logical operators using a custom IR and stack-based evaluation.

Security Camera - Python, OpenCV, AWS

- Developed an application using OpenCV to detect camera motion, enabling automatic recording when motion is detected and stopping when motion ceases.
- Used Boto3 API to autonomously upload video recordings to an AWS S3 bucket.

Weather App - Java, Android Studio

- Designed and developed a mobile weather application that displays real-time temperature, humidity, and conditions for over 200,000 cities worldwide using data sourced from the OpenWeather API.
- Implemented network requests, JSON parsing, and custom UI components in Android Studio to provide a responsive and intuitive user experience.
- Applied clean architecture principles and lifecycle-aware components to ensure maintainability and stability across devices.
